

Spectra™

Broad Spectrum in-feed Mycotoxin Solution

Spectra™ is a combination of high purity yeast cell wall (YCW), diatomites and clinoptilolite, that together provide an optimised approach to the control of mycotoxins in feed and protect the livestock from the risk of mycotoxicosis. It would also maintain the animal's natural defences against disease and improves intestinal tract and digestive function.

Natural
Innovations,
Merging Ideas ...

Role and Mechanism

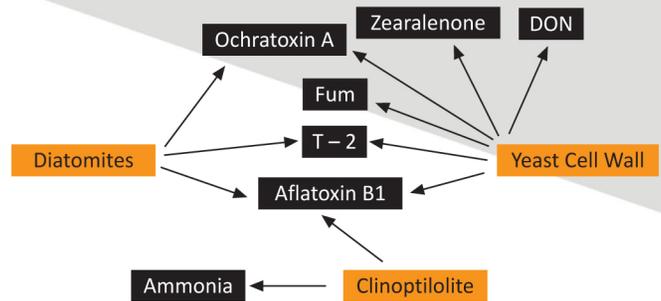

- Yeast Cell Wall** →
 - Offers numerous adsorption sites
 - Inhibits colonisation of pathogens
 - Enhances immunity.
- Diatomites** →
 - Highly selective and effective on aflatoxins and other related mycotoxins.
- Clinoptilolite** →
 - Its lattice structure results in selectivity in adsorbing mycotoxins.
 - Natural ammonia binder.

Typical Analysis

Moisture	≤ 10.0%
Crude Protein	≥ 10.0%
Silica	≥ 35.0%
Ash	≤ 40.0%

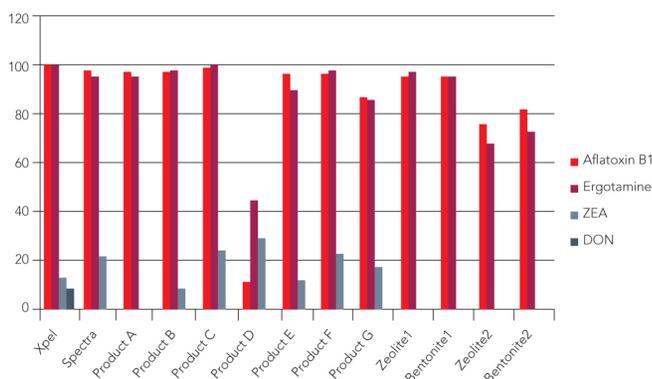

Recommended Usage

Poultry	1 to 2.5 kg per ton of feed
Swine	1 to 2.5 kg per ton of feed
Ruminants	10 to 20 grams / head / day
Aqua	1 to 2.5 kg per ton of feed

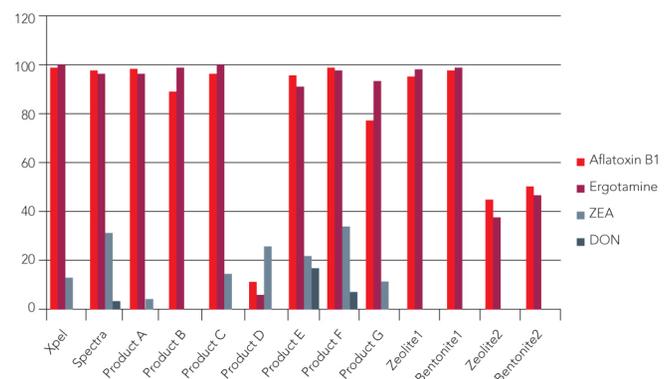

Formulated in specific ratios of the core ingredients, the product is able to effectively target the range of mycotoxin threats....

In Vitro Binding at pH 6.5

In Vitro Binding at pH 3.5
